- SCG concrete roof tile Prestige series is designed for using in Thailand's tropical climate and it passed the wind-rain simulation test according to Thailand's meteorological data through the wind tunnel test in England in accordance with Wind Tunnel Procedure of British Standard BS6567.
- SCG concrete roof tile Prestige series is high quality roof tiles produced by advanced technology and Wet on Wet color coating system using inorganic pigments to ensure a perfect blend with the tiles and long-lasting color for the entire useful life of the tiles.
- Wall fitting set is specially designed to match with the tile's characteristics and suitable for any spot that requires fittings.

Tile Weight (Approximate):

Tile weight	5.2	kg/tile
Constant weight used in roof	55	kg/m ²
Structure design (Dead Load)		

Installation

Install fittings with advanced Dry Tech System and fix fittings with Mechanical Fixing without mortar. The roof will have no cement stains and the fittings will not be loosened from strong wind. The job is of higher standard without depending on a contractor's expertise. Importantly, this method prevents leaks.

Tile Fixing Standard :

Fixing with at least two 2-inch screws per purlin for all tiles and rows
(Fixing method is in accordance with the company's standard)

⚠ Instructions for safe use of SCG concrete roof tile Prestige series

1. Please refer to and follow the installation manual strictly before starting roof installation.
2. The product installation manual has been updated regularly. The product buyer/user, designer, construction controller, and installer shall check whether the manual used is the latest version. If you are not sure or have any question, please check at www.scgbuildingmaterials.com or SCG Contact Center 02-586-2222.
3. Concrete roof tiles and fittings are designed for pitched roof (pitched roof means roof with a constant dihedral angle without curves, e.g. gable roof, hip roof, or mixed gable and hip roof) with a certain dihedral angle as specified for each type of roof according to "installation manual" only.
4. Tile surface is slippery and sloping. Do not go up on the roof unnecessarily. If necessary, it shall be done by an expert only.
5. Do not go up on the roof when the tiles are wet or moist as you might slip and fall from the roof.
6. When moving and storing roof tiles, please strictly follow loading, transport and storing standard manual specified by the company to prevent hazard that might occur during work.
7. Do not use foam-type heat insulation sprayed under the roof as it might affect the roof performance later.
